Abstract of **FR 2712486 (A1)**

The prosthesis , is made from a strip of supple material (10) which is folded or rolled into a cylinder with its thickness equivalent to the gap between vertebrae. The strip (10), wound in a spiral on a central core (21), has self-adhesive surface on both aides and at least one lengthwise reinforcing member which can be made from a material which is radio-opaque or has a shape memory.
